

## Dock Stairs Assembly Manual 5, 6, 7, 8, 9 Steps

There are several pinch points that could cause injury when actuating the incline of the stairs. Use caution when making adjustments to the dock stairs.

Use grease or spray lubricant on the truss head bolts for railing tubes (Item 14). This will help prevent the stainless jam lock nuts from seizing on truss head bolt when using power tools to tighten the nuts.

Spacer Blocks (Item 13)

- DO NOT TIGHTEN BOLTS UNTIL ALL FASTENERS ARE IN PLACE!
- Set-up top step (Item 1) by attaching to something that is waist high or taller for a good working height while assembling the dock stairs.
- Attach 1" x 2" support tubes (Item 4) and top posts (Item 5) to the top step using 3/8" x 2-1/2" bolts, 3/8" flat washers, 3/8" plastic washers, 3/8" brass nylock nuts.
- Install the step footpads (Item 9) into the bottom posts (Items 6 & 7). Tighten set screws.
- Attach 1" x 2" support tubes (Item 4) and the bottom posts (Items 6 & 7) to the bottom step (Item 2) using 3/8" x 2-1/2" bolts, 3/8" flat washers, 3/8" plastic washers, 3/8" brass nylock nuts.
- Install the remaining steps (Item 2) using 3/8" x 2" bolts, 3/8" flat washers, 3/8" plastic washers and 3/8" brass nylock nut. A flat washer and brass nylock nut are used under the step to secure the bolt.
- Install the railing tubes (Item 8) as shown to the posts using 3/8" x 3" truss head bolts, 3/8" plastic washers, 3/8" flat washer, and 3/8" SS Jam Lock Nuts. The truss head of the bolt should be to the inside of the stairs. Rivets installed on the end caps should be on the underside facing the ground.
- Tighten all nuts to engage locking nuts. Do not over-tighten.
